Bristol-Myers Squibb

IFM European contract for 12 sites in over 7 countries. The scope covers utilities and water cycle management, multitechnical maintenance, janitorial services, grounds management, laboratory support activities and an array of services for building occupants.

A major manufacturer in the pharmaceutical industry.

Veolia delivers solutions for the infrastructure utilities management on 10 sites throughout Europe while integrating technical complexity of facilities; cost efficiency and continuous improvement.

CIMO, the joint venture between BASF and Syngenta, is mainly active in the areas of energy management, waste processing, technology and maintenance of the Monthey site and has been disposing of all hazardous waste that cannot be treated on site at Veolia Switzerland since 2014.

ArcelorMittal

Veolia and ArcelorMittal have created a joint venture to modernize the Fos-sur-Mer power plant (168 MWe / 800 MWth) and increase the site's environmental performance by optimizing energy from iron and steel gases and the reduction of CO2 emissions.

VOLVO

Veolia operates on 5 Swedish sites, including the company's headquarters and 4 Renault Trucks sites (the French subsidiary firm of Volvo) across the multitechnical and multiservice scope.

MARS

On 4 sites in France, Veolia deliver a service offering covering the internal collection and treatment of organic, non-hazardous and hazardous waste, building services maintenance, tertiary and industrial cleaning and all of the services to occupants.

Awarded "Best technical supplier" by PSA Group in 2011 and further recognized in 2017 with the "Indirect Material, Machinery & Equipment Trophy", Veolia is responsible for the group technical maintenance and soft services in France and Slovakia.

Veolia and Naval Group have created Défense Environnement Services (DES), a specialized company that delivers a unique offering for the defense, nuclear and aerospace sectors.

Water Management

Water, a strategic resource in your company

Veolia supports commercial enterprises and industry with a wide range of water and wastewater services.

Our experience and know-how:

- Operating water management facilities cost-efficiently and safely
- Meeting the requirements in climate and environmental protection
- Driving forward the digitization of the water industry

Water balance

Veolia experts help you set, achieve and continuously optimize your company's resource targets. Veolia has in-depth experience in balancing water consumption and implementing sustainable water management strategies. We also develop customized process water and recycling projects.

Our expertise ranges from drinking water to pure and ultrapure water (also GMP), boiler feed water (power stations), process water (close loop), wastewater recycling and sludge treatment.

As a result, you can improve the efficiency of your entire value chain, and reduce your costs.

At a glance:

- Operation of water supply and wastewater disposal systems according to your specifications
- Central monitoring/control
- Maintenance, optimization and renewal of equipment
- Material procurement and storage
- On-call service for fault monitoring and repair
- Laboratory services
- Complete or partial technical operations management

Waste Management

Leading services for sustainable waste recycling

Veolia stands for prudent, efficient waste management. We work out optimum recycling and disposal concepts with our customers and help them to avoid and reduce waste

Thermal recycling and hazardous waste disposal

Veolia manages the entire process from analysis, logistics, and treatment to the safe and environmentally sound disposal of hazardous waste. We advise you on technical and legal issues and develop customer-specific disposal concepts.

We incinerate solid, paste-like, liquid and gaseous hazardous waste in our modern high-temperature furnace. With the resulting waste heat, we generate electricity and steam for use in industrial plants and a shopping center/hotel complex.

Optimum management and industrial waste recycling

Veolia is an expert for sustainable and comprehensive waste management from a single source. You will benefit from our expertise in the entire waste management cycle:

- Consulting on waste prevention
- Recycling solutions
- Low-impact disposal techniques
- Guarantees for safe operation

Our specialists develop customized concepts for waste management in industrial plants and parks. The focus is on economic efficiency, ecology and safety.

Energy Management

From the audit to the operation of your plant

Veolia develops concepts for the sustainable management of various energy sources for private, public and industrial customers and implements them competently.

Our innovative services help you concentrate on your core business and work even more productively.

Thorough audits and consulting

A thorough analysis of your energy management is the basis for identifying ways to optimize it for your company. Veolia uses customized benchmarks that enable continuous monitoring of key indicators.

For the development and optimization of energy plants Veolia combines experienced local know-how with its global experts.

Our services include innovative concepts, efficient planning and professional management.

Reliable power supply

Veolia strives with its energy services to achieve maximum availability and efficiency for its customers.

Our vast experience in maintenance and servicing solutions satisfies the diverse needs of a wide range of customers.

If energy management is not part of your core business, Veolia will take over the planning, financing, installation, operation and maintenance of energy systems on your behalf. In this way, we reduce your operating and investment costs to a minimum.

Facility Management

Veolia covers every aspect of Facility Management

Veolia has unique expertise in the maintenance of critical industrial facilities. We support you in every aspect of facility management.

Flexible and demand-oriented requirement profiles

Veolia continuously analyzes and defines the specific requirements for the maintenance of industrial systems. Our specification sheets comprehensively map both the management processes and the technical aspects.

For services that Veolia does not provide, we act as general contractor to manage your supplier relationships. Veolia attaches importance to maximum availability and the most resource-efficient management possible of the processes entrusted to it. Wherever possible, we realize potential savings.

Multi-client and multi-site

Veolia has many years of experience both as a service provider of shared industrial parks and in the facility management of individual customers across sites. We are experts in realizing synergies, economies of scale and fair cost allocation.

Your benefits

- Scope of services according to needs
- Cost transparency
- Higher plant availability through business continuity strategy
- Less risk through performance-based contracts
- Central information platform, direct contact persons
- Continuous on-site presence
